PROJECTS

AquaFix: A digital system that allows residents to report water problems and municipalities to track and resolve them efficiently. **(Final Year Project)**

- Wrote a Scope Statement to define the project's objectives, deliverables, and stakeholders.
 - Created the Project Plan to outline the project schedule, tasks, resources, and timelines.
 - Gathered and documented requirements to ensure the system met stakeholder and user needs.
 - Designed UML diagrams using Visio to model the system structure, processes, and interactions.
 - Created Test Cases to be used for Unit, Integration, System, and Acceptance Testing to ensure the system met the specified requirements.
-
